Australian Centre for Geomechanics

The Australian Centre for Geomechanics (ACG) was formally established in 1992 as a University of Western Australia not-for-profit research centre in order to promote research excellence and continuing education in geomechanics, with particular emphasis on its application to the mineral and energy extraction sections of Australia's resources industry.

The Australian Centre for Geomechanics is an unincorporated Joint Venture involving:

- CSIRO Mineral Resources
- The University of Western Australia — Civil, Environmental and Mining Engineering

The ACG draws together staff knowledge, experiences and expertise from within the two groups forming the Centre and facilitates a multi-disciplinary approach to research and education in geomechanics. Research undertaken by the ACG attracts both national and global support and the outcomes of the projects are utilised to promote safer mining and environmental geomechanics practices, operating efficiencies and to meeting community expectations for sustainable mining practices.

With the guidance of strong industry representation on the Board of Management, and close collaboration with senior representatives of the mining industry, research, training and further education activities are tailored directly to the needs of industry. The ACG Board expects the Australian Centre for Geomechanics to be the focal point for industry on geomechanics issues and to address the needs of industry through a collaborative interdisciplinary approach.

Online Repository of Conference Proceedings

Launched in 2017, the ACG Online Repository of Conference Proceedings provides the global mining community with open access, peer-reviewed conference papers that may assist industry practitioners to maintain and develop their skills, knowledge and capabilities. This highly interactive and searchable repository provides importable citation information in various forms, links to the paper authors' profiles on ResearchGate and LinkedIn, as well as the ability to share papers on social media.

With the recent addition of the SSIM 2021 papers, more than 350 open pit conference papers are now freely available.

Setting a high standard for technology transfer and accessibility, this valuable online resource will continue to develop and grow with future conferences. In October 2021, the Repository achieved a significant milestone with over 585,000 paper downloads; including a remarkable 115,000 downloads of Open Pit conference papers.

Scan the QR to view the SSIM 2021 Conference Proceedings papers.

Over 2,000 mining
geomechanics papers
available to download

Over 350 open pit papers
openly accessible

Technical Reviewers

The dedicated efforts of the peer reviewers have resulted in the high quality of the technical program and the papers compiled for this publication. The editor thanks the following people who contributed their time and expertise as reviewers of manuscripts for the proceedings of the Second International Slope Stability in Mining Conference. A technical and critical review of each paper was undertaken by a minimum of two reviewers for the production of these proceedings.

Preface

This conference is being held during the COVID-19 pandemic which has resulted in lockdowns, loss of life and a significant impact on many people's lives. Interestingly, the mining industry has largely been without incident, which is a credit to our workforce.

This conference originated from the ACG First Asia Pacific Slope Stability in Mining Conference (APSSIM) held in 2016. With demand it has now evolved into a series of International Slope Stability in Mining Conferences (SSIM), with emphasis on specific issues associated with our industry with respect to safety, risk management, detailed monitoring, groundwater issues, and remediation.

Foremost is the safety of personnel. Our industry upholds the highest standards to minimise injury from instability in pit walls and access to the mines. However, we are also fully cognisant of the fact we are dealing with natural materials often affected by alteration resulting from the mineralising process, local tectonics, and weathering. We cannot relocate the mine if these aspects are unfavourable, so we need to recognise the challenges and deal with the risks involved.

Why monitoring? It is an essential key along with observational techniques to manage project performance – if you cannot measure it you cannot manage it. Indeed, a significant issue in our design process is that deformation is seldom used to evaluate a design, yet this is the only measure we have during development and closure that we can use to infer stability. This is a major challenge for our engineers and geologists.

Groundwater and surface water affect stability and impose constraints on blasting. The difficulty experienced when removing water has significant implications on successful mining.

Mine closure is something that is left to last. It raises issues of what is behind the wall, in terms of geology/structure, which is often not explored in detail before or during mining, where our focus is on what we can see. More attention is needed in this area. We will be faced with legacy issues (blast damage, weathering, continuing deformation, etc.) long after the mine has ceased operation, but long-term monitoring will be necessary after closure.

This conference addresses many of these issues. The majority of keynote lectures were selected from papers submitted and deemed noteworthy by the committee and reviewers.

A conference such as this could not have taken place without the support of the Principal Sponsor Reutech Mining, and our sponsors and exhibitors. Thank you to all sponsors for your involvement in and your support of the conference series.

The proceedings are freely available from the ACG Online Repository of Conference Proceedings, courtesy of Open Access Sponsor SRK Consulting. The papers can be accessed from papers.acg.uwa.edu.au/ssim2021

All the people supporting this conference are gratefully acknowledged for their time and efforts.

Professor Phil Dight, Australian Centre for Geomechanics, Australia
Editor and Conference Chair

Conference Sponsors

The Australian Centre for Geomechanics proudly acknowledges the generous contribution by the Principal and Major Sponsors of the Second International Slope Stability in Mining Conference.

MAJOR SPONSORS

BHP

Table of Contents

iii	Australian Centre for Geomechanics
v	Australian Organising Committee
vii	Technical Reviewers
ix	Preface
xi	Conference Sponsors

Keynote addresses

3	Three-dimensional limit equilibrium slope stability analyses, method, and design acceptance criteria uncertainties <i>JRL Read, John R Read Associates Pty Ltd, Australia</i>
11	Visualising bias of structural orientation data <i>RDH Thomas, Absolute Geotechnics Pty Ltd, Australia</i>
27	Numerical assessment of an overall instability at Bajo de la Alumbrera Mine <i>CF Cancino, Itasca Consulting Group Inc., USA; R Silva, Itasca SpA, Chile; C Giraud, Glencore, Argentina</i>
37	Building useful geotechnical models <i>IA de Bruyn, SRK Consulting, Australia</i>
51	Novel techniques for rockfall management using remote equipment at Savage River Mine <i>WJ Darlington, IM Snyders, C Woodward, P Paramasivam, N Urmale, Z Corbett, TD Rathnaweera, M Mohammadnejad, Grange Resources, Australia</i>

Slope optimisation

69	Optimal pitwall profiles to maximise the overall slope angle of open pit mines: the McLaughlin Mine <i>A Agosti, Newcastle University, UK; S Utili, OptimalSlope, and Newcastle University, UK; C Valderrama, Itasca SpA, Chile; G Albornoz, SRK Consulting, Chile</i>
83	Development and application of a reliability-based approach to slope design acceptance criteria at Bingham Canyon Mine <i>M Gaida, D Cambio, Rio Tinto Kennecott Copper, USA; ME Robotham, Rio Tinto Copper, Australia; V Pere, Golder, Australia</i>

- 95 Optimisation of slope design using three-dimensional limit equilibrium: case studies from the Pilbara**
D Dwumfour, R Jele, Z Jolly, Fortescue Metals Group, Australia

Application of three-dimensional limit equilibrium methods

- 107 Case study: open pit three-dimensional slope stability back-analysis for an anisotropic iron ore rock mass**
L Figueiredo, M Barros, Anglo American, Brazil; R Hammah, Rocscience Inc., Ghana; Y Santos, T Souza, C Nogueira, Walm Engenharia Ltda., Brazil
- 121 Application of three-dimensional limit equilibrium in the slope stability assessment process**
D Dwumfour, J Dixon, Fortescue Metals Group, Australia; P Croft, Brockman Solutions, Australia; M Fredlund, Bentley Systems, Canada

Structural data gathering and interpretation

- 135 Drone photogrammetry: a structural data gathering tool for open pit mining geotechnics**
J Dey, S Roy, SRK Mining Services (India) Pvt Ltd, India; A Matin, University of Calcutta, India
- 149 Preliminary identification of persistent or pervasive discontinuities from borehole data**
J Whittall, J Danielson, BGC Engineering Inc., Canada
- 159 Structural data bias assessment at Jwaneng Mine**
K Gabanakgosi, O Mogorosi, K Rametlae, B Boitshepo, OM Barei, Debswana Diamond Company, Botswana

Slope monitoring and its interpretation

- 177 Integrated three-dimensional laser scanning implementation for monitoring tailings dams**
P Monreal, Maptek, Chile
- 185 InSAR monitoring guidelines: using simple to use decision trees – an owner’s perspective**
M Desjardins, De Beers, Canada; PJH de Graaf, De Beers Group, Anglo American, Australia
- 199 Slope monitoring using sensor fusion**
MK Elmoultie, X Luo, P Dean, J Duan, J Malos, CSIRO Mineral Resources, Australia
- 211 Who needs resolution anyway? Three satellite InSAR case studies comparing coincident and contemporary datasets**
D Holden, 3v Geomatics Inc., Canada; D Cerin, 3v Geomatics Inc., Italy; K Mäkitaavola, F Ersholm, Luossavaara Kiirunavaara Aktiebolag, Sweden; J Sjöberg, Itasca Consultants AB, Sweden

- 227 Artificial intelligence applied to the detection and early warning of geotechnical instabilities in mining slopes**
N Contador Villegas, H Huenchulao Catalán, JM Oliva Miranda, E Mining Technology S.A., Chile; F Dubournais Donoso, M Gallardo Arriagada, Antofagasta Minerals S.A., Chile
- 235 Introducing a data-driven framework for spatiotemporal slope stability analytics for failure estimation**
A Tordesillas, S Kahagalage, The University of Melbourne, Australia; L Campbell, P Bellett, GroundProbe, Australia; R Batterham, The University of Melbourne, Australia
- 247 Accumulated movement data and the amplitude dispersion index: a collation alarm**
S Coetsee, N Greyling, P Narshai, Reutech Mining, South Africa

Risk management and operational safety

- 261 Natural slope hazard management and integration with mining operations**
MJ Eggers, T Nash, PSM, Australia; D Dwumfour, S Turbitt, J Dixon, Fortescue Metals Group, Australia
- 277 Mining through historic underground workings and systematic void management processes at McArthur River Mine**
W Smith, McArthur River Mining, Australia; R Bertuzzi, PSM, Australia
- 287 Ground support in open pits and operational safety**
S Welideniya, Department of Mines, Industry Regulation and Safety, Australia; N Bar, Gecko Geotechnics Pty Ltd, Australia; J Price, MMG Limited, Australia

Slope stability in weak rocks and rock dumps

- 297 Geotechnical parameters for pit slopes in weak volcanic rocks on Simberi Island, Papua New Guinea**
NRP Baczynski, Prime Geotechnics Pty Ltd, Australia; JN Moncrieff, FXJ Mining Technical Services, Australia; KA Woodward, Simberi Gold Company Limited, Papua New Guinea
- 315 Compaction faulting in thick mudstone: a slope stability case study of Prominent Hill open pit mine, South Australia**
MJ Fowler, PSM, Australia; DJ Goodchild, OZ Minerals Ltd, Australia
- 341 Estimation of shear strength of very coarse mine waste**
S Linero-Molina, LF Contreras, SRK Consulting, Australia; J Dixon, Fortescue Metals Group, Australia

Constructing geotechnical models

- 357 The importance of robust validation of geotechnical data and systematic domaining in defining appropriate rock mass parameters as inputs for modelling and design**
J Paul, SRK Consulting, Australia; M Griffin, Cowi, UK
- 373 Improving reliability of the geotechnical model for Cenozoic cover sequence sediments in the Pilbara, Western Australia**
DP Noble, DJ Hemraj, MJ Eggers, PSM, Australia
- 387 Geotechnical design uncertainty and data collection**
JJ Mathis, Zostrich Geotechnical, USA
- 401 Improving the geostatistical modelling of geotechnical variables considering directional dependence**
LK Sánchez, University of Chile, and CSIRO-Chile International Center of Excellence in Mining and Mineral Processing, Chile; MINES ParisTech, France; X Emery, University of Chile, Chile; SA Séguret, MINES ParisTech, Paris Sciences et Lettres University, France

Groundwater management, dewatering and depressurisation

- 415 Horizontal drain holes: a case study**
A Duran, PSM, Australia

Bench design and implementation

- 431 Case study: bench turnover best practice and pit wall remediation at the Newmont Boddington Gold mine**
CL Powell, N Brockhurst, C Wemmers, M Torombe, E Eames, D O'Callaghan, S Findlay, G Franks, Z Ubaid, A Lopez, Newmont Australia, Australia
- 445 Improvement in operational continuity and risk management based on the integration of bench geotechnical condition and monitoring**
M Vargas, J Bello, C Calderón, TIMining, Chile
- 457 Improving bench design through discrete fracture network analysis**
M Valerio, S Rogers, Golder, Canada; KP Lawrence, Golder, USA; C Byrne, K Veltin, T Darakjian, Golder, Canada; M Gaida, Rio Tinto Kennecott, USA; D Cambio, Rio Tinto Kennecott, USA; GK Chapin, Rio Tinto Kennecott, USA

Case studies

- 475 Case study: rockfall assessment and mitigation at the Newmont Boddington Gold mine**
CL Powell, N Brockhurst, Newmont Australia, Australia

- 485 A case study of Loy Yang Mine: geotechnical considerations when remediating heat affected coal batters**
S Narendranathan, N Patel, GHD Pty Ltd, Australia; A Symonds, AGL Loy Yang, Australia

Rockfall and runout

- 501 Improved prediction of runout distance for in situ highwall instability in Australian eastern coast coal mines**
L Nairn, F Della Pasqua, D Payne, BHP, Australia
- 513 What can we learn from long-term creep trends in open pit slopes?**
J Lupo, Newmont, USA
- 527 Author Index**
